INSTALLATION GUIDE - HARMONY

SOUNDTECT HARMONY IS FAST AND EASY TO INSTALL.

We recommend Soudall Contact adhesive is used and that the glue is piped across the back of the panels like this to create a good bonding surface.

For large panels or if layering panels above one another we also recommend air nails / nail gun is used in the four corners for extra stability and that a temporary batten is installed at the base on the panels to take the weight whilst the adhesive dries.
